

Portfolio

We build web sites. We also build web, desktop and mobile applications.

We love Ruby on Rails, OpenSource software and *nix flavor of OS.

We are resourceful, competitive in pricing, and have a spotless track record.

We deliver and we deliver always on time.

Try us today.

Client: **Sarayu Technologies**, UK

[http:// www.deskarma.com](http://www.deskarma.com)

Deskarma is a network for Professional Development. People can write articles, get voted, earn karma and increase their professional worth using Deskarma. It allows a user to leverage the power of social networking to create a personal brand and leading to professional gain like Jobs, Business Development.

Client: **Symbid**, Rotredame, Netherlands

[http:// app.symbid.com](http://app.symbid.com)

The project is a crowd-sourcing platform for entrepreneurs to improve their business ideas, and get funded. Built on the base of Social Networking Fundamentals, Symbid uses the wisdom of crowd to improve business ideas and raise capital for execution. We integrated multiple video clients like Vimeo, YouTube, Ted, and MySpace.

Client: **Bluechip Apps**, Columbus, Ohio

<http://matrixmediaservices.com>

This is a web application for internal usage of an outdoor advertising company, Matrix Media Services. The application helps the company to build proposals for outdoor advertising. It uses Microsoft Virtual Earth technology to locate the exact credentials of an advertisement and enter various values for variables related to it. It has ability to search, add photo-sheets, manage proposals, clone them, maintain different versions, archive them and export them as PDF & spreadsheets.

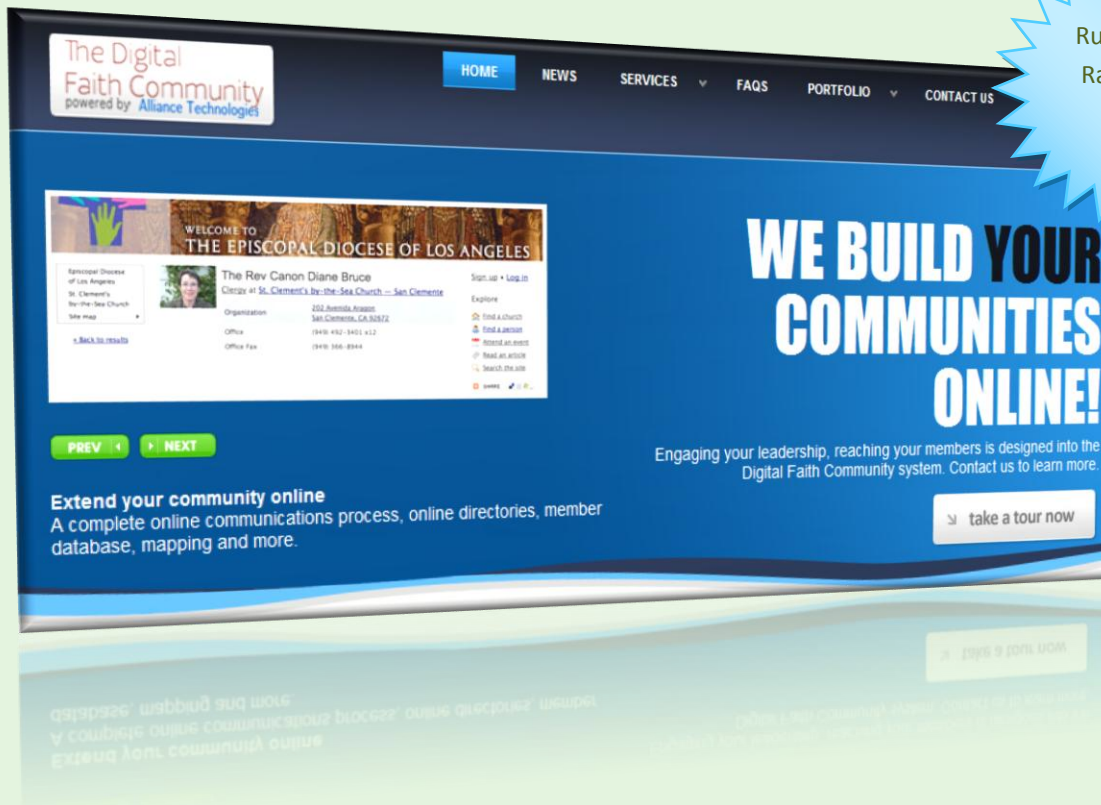

Ruby 1.8.7,
Rails 2.3.4,
Beast forum,
Google Maps,
Haml

Client: **Tangosource LLC**, Seattle

[http:// www.dancehop.com](http://www.dancehop.com)

The application is a social network for Dance Professionals. We worked on enhancing the applications with events, and forum modules. It was a short term project with a few features and bug fixes for a required release.

Ruby 1.8.6,
Rails 1.2.5

Client: **Alliance Technologies**, Atlanta, GA

[http:// www.digitalfaith.org](http://www.digitalfaith.org)

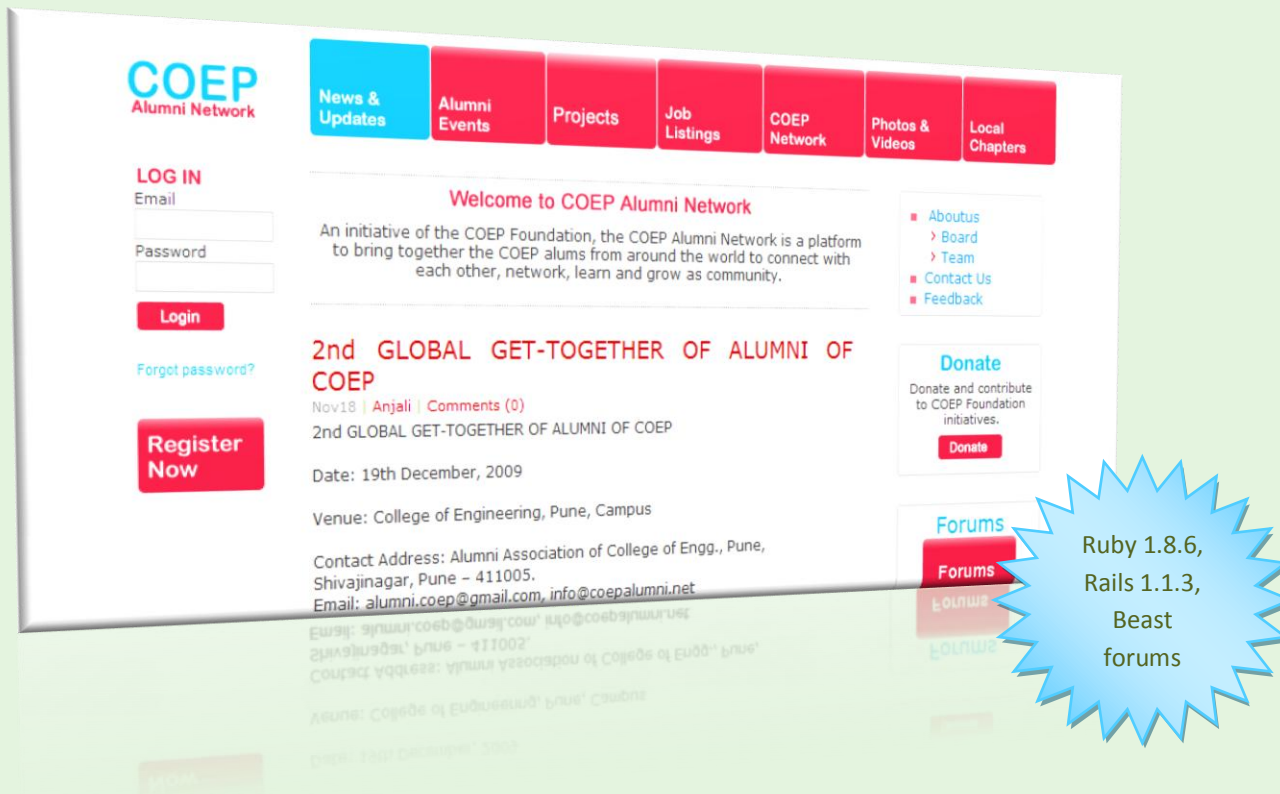

Digital Faith is a Custom CMS for building communities around churches, parishes and diocese. It is used for developing their websites, managing mailing lists, scheduling community events, etc. An iPhone application for the same website has also been developed by us.

Client: **Acclaro Media Systems, UK**

Titanium Desktop/iPhone application

Acclaro Media Center is a home entertainment product. The dashboard of the product (the titanium part) allows user to select movies from a storage server and play the movies on the television. The application downloads the movie information from IMDB and music details from Cddb. It also facilitates functions like ripping DVDs, audio CDs to ISO and flac formats.

Client: **COEP Foundation**

[http:// www.coepfoundation.org](http://www.coepfoundation.org)

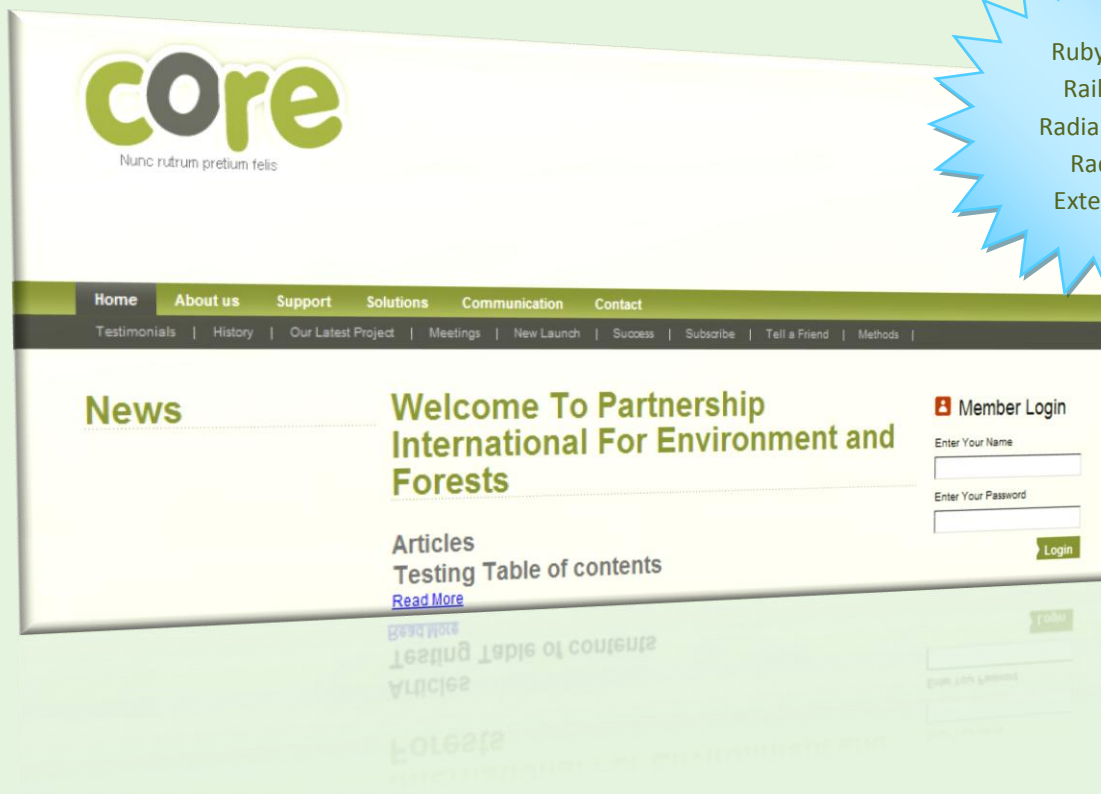

COEP foundation is a non-profit organization, based in Silicon Valley and deals with the Alumni of College of Engineering, Pune. The application is an alumni networking website, where they share photos of events, write blogs, give job intimations, and have discussion forums. We were responsible for ongoing maintenance and doing enhancements for the site.

Client: **Campus Fever**

[http:// www.campusfever.com](http://www.campusfever.com)

Campusfever is a Social Networking Portal for the education community. It intends to connect campuses across the country with a unique idea of online notice boards, private chat sessions between teachers and students, online examination. Build on Rails 1.2.5 and has been since migrated to a PHP platform by the customer.

Ruby 1.8.6,
Rails 2.1,
Radiant CMS,
Radiant
Extensions

Client: **Partnership International for Environment and Forests**, Helsinki, Finland

[http:// www.pief.org](http://www.pief.org)

The site is based on Radiant CMS and includes development of radiant extensions. It includes extensions for bibliography, automatic permalink creating, automatic site navigation creation, etc.
